The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer associated antigen precursors expressed in human breas which are cancer as a constant and the cancer and the cancer and the cancer and the cancer and the cancer and the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,

The genes are overexpressed in prostate cancer, and some are overexpressed in other cancers such as stomach cancer and oesophageal cancer. The nucleic acids are useful for detecting and monitoring cancer, particularly prostate cancer. They are particularly useful in the treatment or prevention of cancer, in producing DNA-based vaccines against prostate cancer or that promote anti-tumor immune responses, and to raise antibodies. The expression of genes and detection of their protein products and/or peptides may be used to monitor disease progression during therapy, or as a prognostic indicator of initial disease status of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 373 BP; 128 A; 59 C; 93 G; 93 T; 0 other;

The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product and the many of the agent and the latermining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-JUN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                                                                                                                                                                                                                                                 CC cancer associated nucleic acid molecules (N) and proteins (P), where Ct he proteins are collectively known as colon cancer antigens. The colon C cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate P C expression. For example, N and P may be used to treat disorders in a patient's genome that affect the activity of P by expressing CC inactive proteins or to supplement the patients own production of P. CC Additionally, N may be used to produce the colon cancer-associated Ps. CC Additionally, N may be used to produce the colon cancer-associated Ps. CC Inactive proteins or to supplement the patients own production of Ps. CC Additionally, N may be used to produce the colon cancer-associated Ps. CC Inactive proteins. N and P cancer cancer associated Ps. CC Additionally, N may be used into a host cell and culturing the cell constraint of colorectal carcinomas and cancers. Analyzing to Analyzing and Analyzing to Analyzing the proteins of colorectal carcinomas and cancers. Analyzing to Analyzing the proteins of the present invention.
                                                                                                                       Query Match
                                                                                                                                                                                       present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.

AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antign procursors (CAAP) respectively. AAB63232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucle acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein
                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.
                                                                                                                                                                                                                                                              Claim 50;
                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2001-025274/03.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
  AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB63232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nu
                                                                                                                                                                                                                                                                                Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

AAB63232 to AAB63468 to AAB63721 and AAB63720 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,

Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies. cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Incyte Genomics, Inc.
Clone distribution: MGC clone distribution information can be
Cound through the I.M.A.G.E. Consortium/LLNL at:
               /note-*Organ: brain; vector: pCMV-SPORT6; Site_1: NotI; Site_2: EcoRV (destroyed); RNA source anonymous pool of 6 male brains, age range 23-27 yo. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.5 kb, insert size range 1-3 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 019. Note:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to nucleic acids and encoded polypeptides which are cancer associated antigens expressed in patients afflicted with small cell lung cancer. The molecules provided by the invention can be used in the diagnosis, monitoring, research or treatment of conditions characterised by the expression of one or more cancer associated antigens. The polypeptide is used to treat a disorder characterised by expression of a hCAAP, and determine regression, progression or onset of a condition characterised by expression of an abnormal amount of a protein encoded by a nucleic acid (NA) Group 1 molecule. The disorders are small and non-small cell lung cancer, helmowar colon, breast, head and neck, or transitional cancer, leimyosarcoma or synovial sarcoma. The present sequence is a DNA encoding human eukaryotic translation initiation factor eIF2B. This small cell lung cancer associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated polypeptide, used to treat or prognose a disorder characterized by expression of a hCAAP e.g. cancer, is encode isolated nucleic acid comprising an NA Group 3 or 4 molecule
